Technology: Choose your core platform

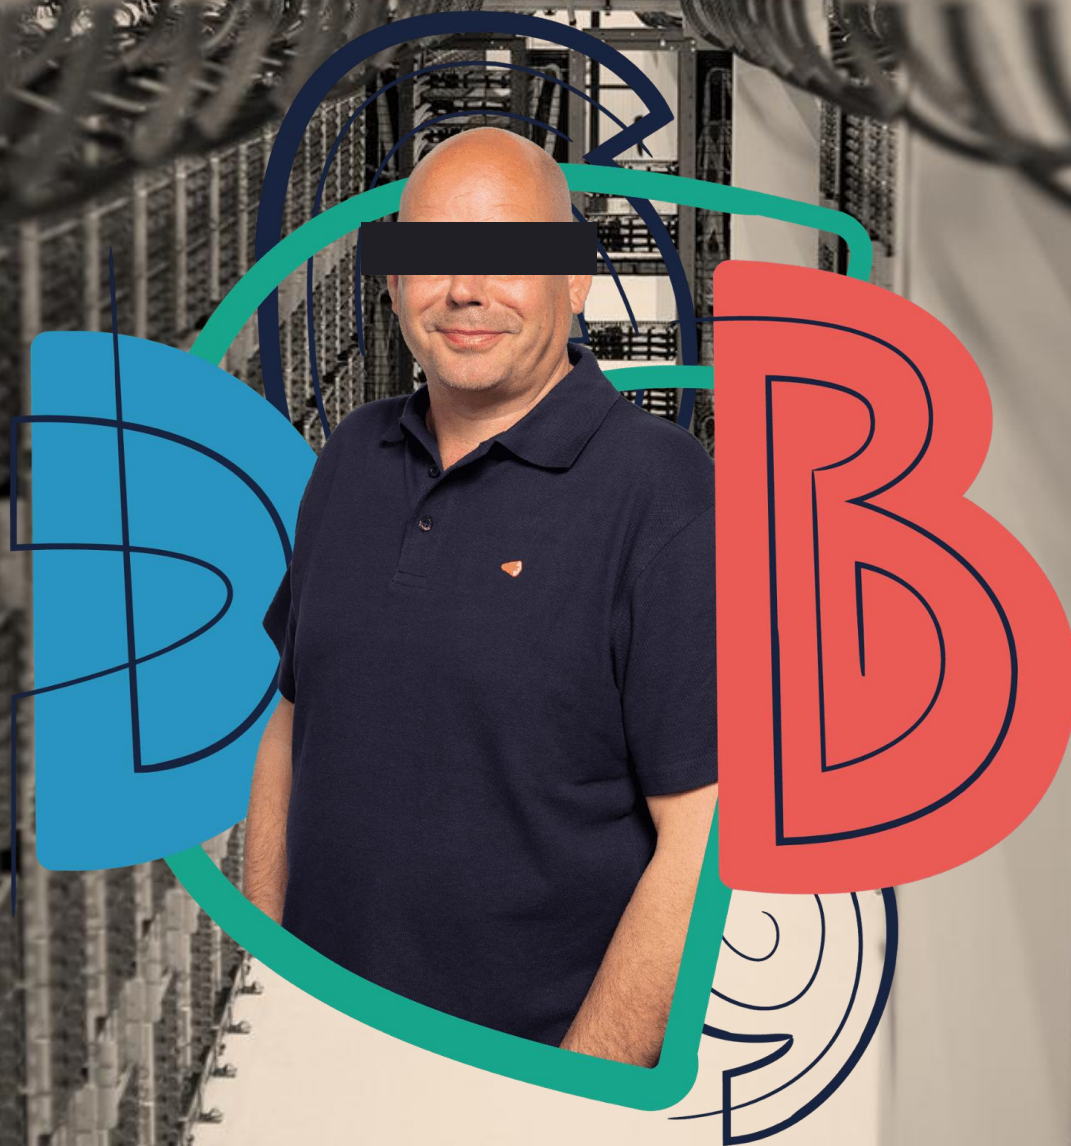

echnology: AI is young & rapidly evolving

- > Some standards are only months old
- > There's still a lot that will change; dust must settle
- > We got a new toy, now we have to learn how to play with it
- > *In the street of the blind, the one-eyed is the guiding light*
- > Battle between proprietary solutions vs open standards

ChatGPT was released on November 2022

 uco B.

Unboxing...

I - what's inside - "Large Language Model" - LLM

- > Contains a *Neural Network* - like parts of our brains
- > Basically returns the most likely continuation of a piece of text
- > Trained on Billons of tokens (text-fragments/ words)
- > After training the LLM becomes static in its existence; a *model* is born
- > There are millions of LLM models. Most with specific trained specialties
- > Intelligence ranges from elementary-school to university - The 'B' value
- > Some models can reason with itself. Breaking complex questions down
- > LLM's run in apps like Copilot, ChatGPT, Ollama, HuggingFace, etc.
- > In the cloud or locally on your own hardware (*old CAD server anyone?*)

esting our *Neural Networks*

Please complete these phrases

To be or ...

Roses are ...

A Martini, shaken ...

I - what's inside - LLM: *Context*

- > The LLM has no knowledge of your data. But it will answer confidently like a 21yr old that thinks it knows everything!
- > Your data can be provided to the LLM as *context* in your prompt:

*""""To: j.janssen@acme.com, From:p.puck@uni.net, subject: Brienenoordbrug Rotterdam, Hi Jan, Thanks for your proposal on the reconstruction of the van Brienenoordbrug... Kind regards, Peter""""
Wat is the tone of this e-mail?*

- > The *context* is sent back and forth with each query/ answer. Keeping/ adjusting the conversation context. Context does not stay in the LLM
- > The *context* is limited per model. Usually 4K - 200K tokens (text-fragments/ words)

I - what's inside - LLM: *Temperature & hallucinating*

- > Identical prompts give different results
- > LLM have some randomness/ creativity to make them more human
- > Level of creativity controlled by the LLM's *temperature*
- > Given the right *temperature* and *context size* can make a LLM *hallucinate*

I - what's inside - *Grounding*

- > Automatically providing *context* to your LLM prompt is called *Grounding*
- > Static text like an e-mail, or dynamic text from a database query
- > *Retrieval Augmented Generation (RAG)*. A vector database with data, indexed from documents/ e-mails
- > Typically outpaced by real-time information
- > *Connectors* connect a LLM to *live* data; like Domino or SQL-database
- > Technical implementation differs per AI provider

I - what's inside - "Large Language Model" - *Agents*

- > Copilot is a *personal* assistant; it knows you/ your m365 data
- > *Agents* are *impersonal Copilots*; machines
 - Created for specific task/ role; handling support, sales, etc
 - Only knows the data you assign to it
 - Can connect to specific company data using *connectors*
- > Technical implementation differs per AI provider
- > *Model Context Protocol (MCP)*. Emerging open standard to make *agents* and *grounding* interoperable and independent of AI providers

icrosoft Copilot / Azure OpenAI Service

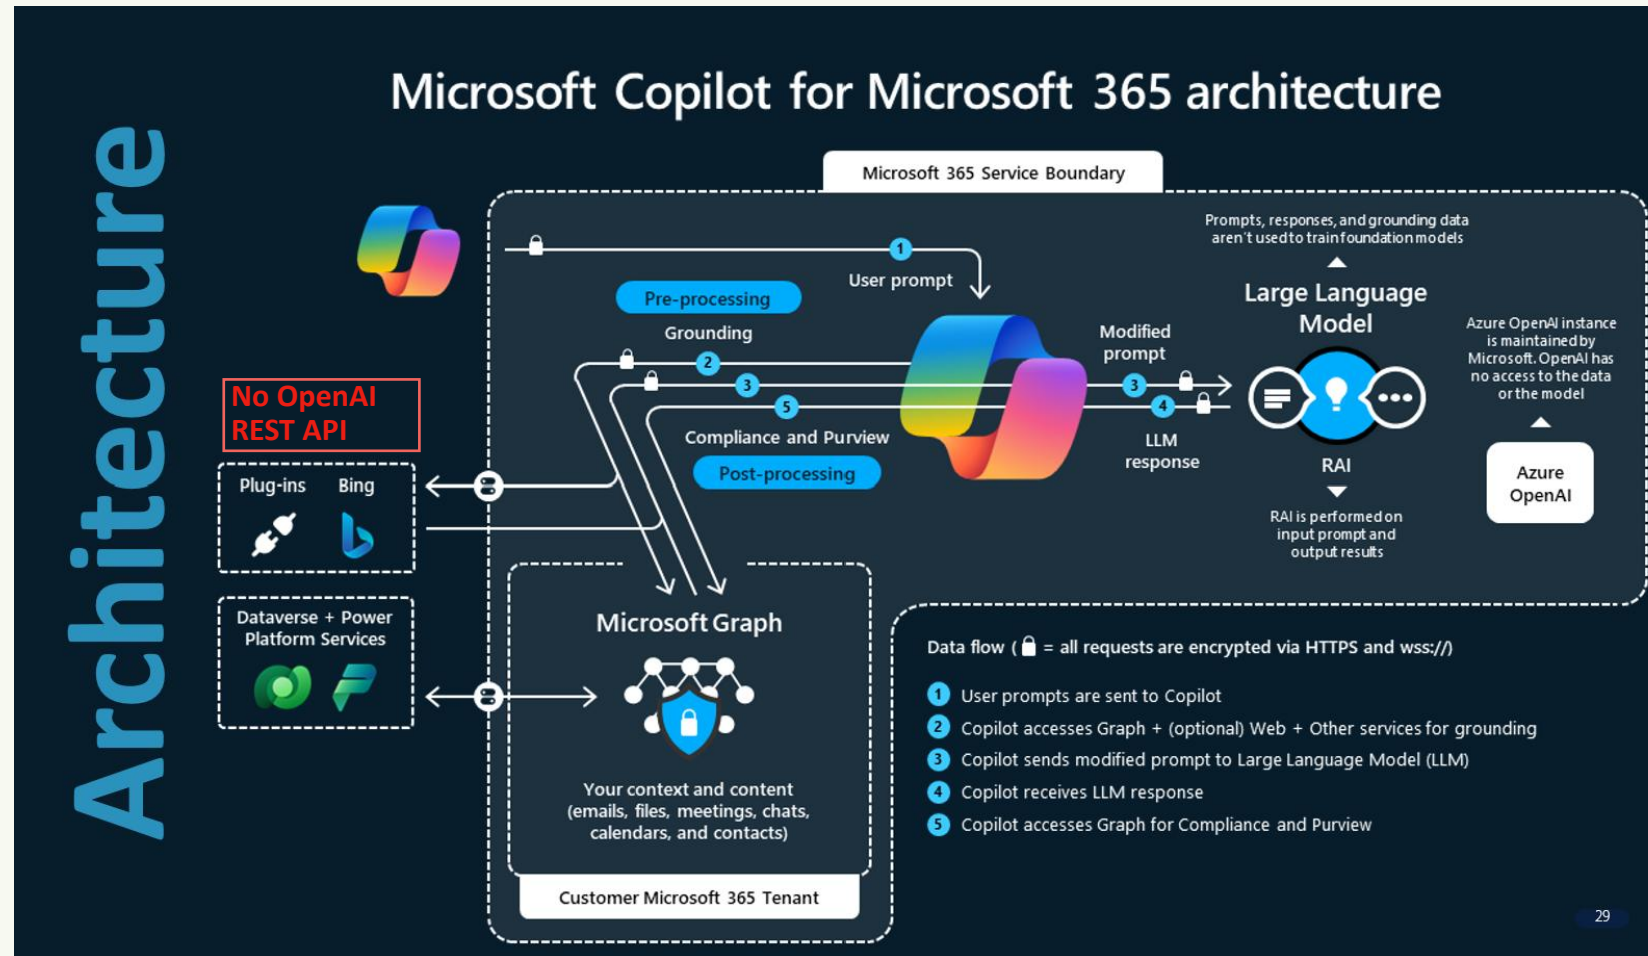

Microsoft Copilot (€30/user)

- > The go to AI solution in M365; Targets normal code and writing tasks
- > Connects with your M365 data and web content
- > Connectors incl. web-api connector - *Hello Domino!*
- > Agents for specific roles like front desk/ clerk/ ticketing
- > No OpenAI REST API

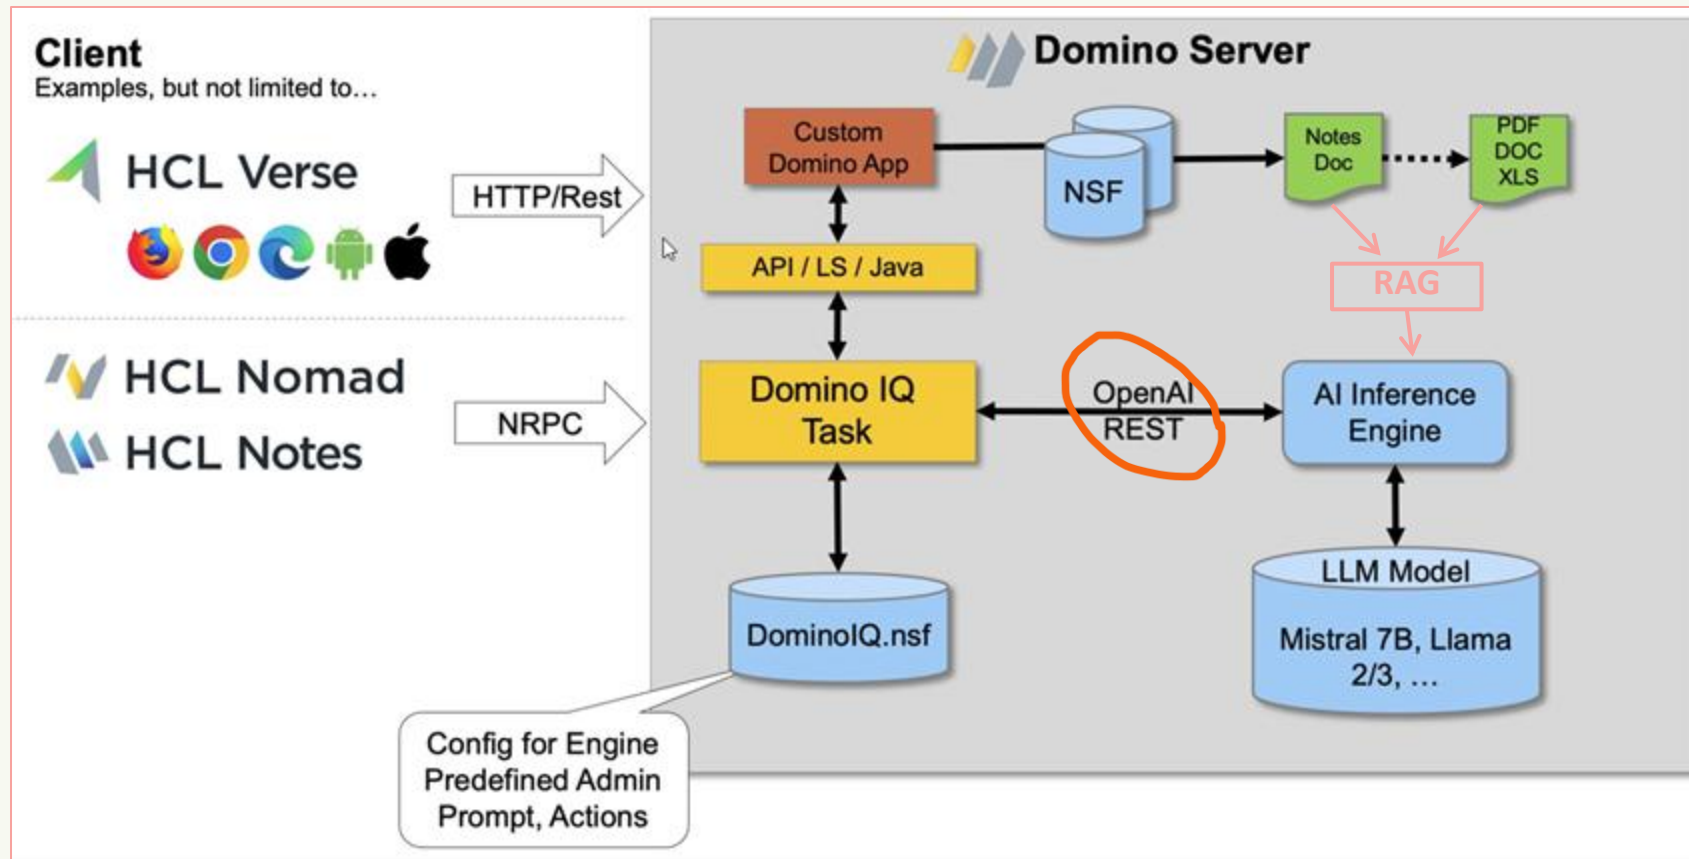

Microsoft Azure OpenAI Service - By OpenAI Inc. consortium

- > Broader range of LLM's, lang./image processing, speech-to-text, etc.
- > Supports OpenAI REST API
- > Realtime or batch processing

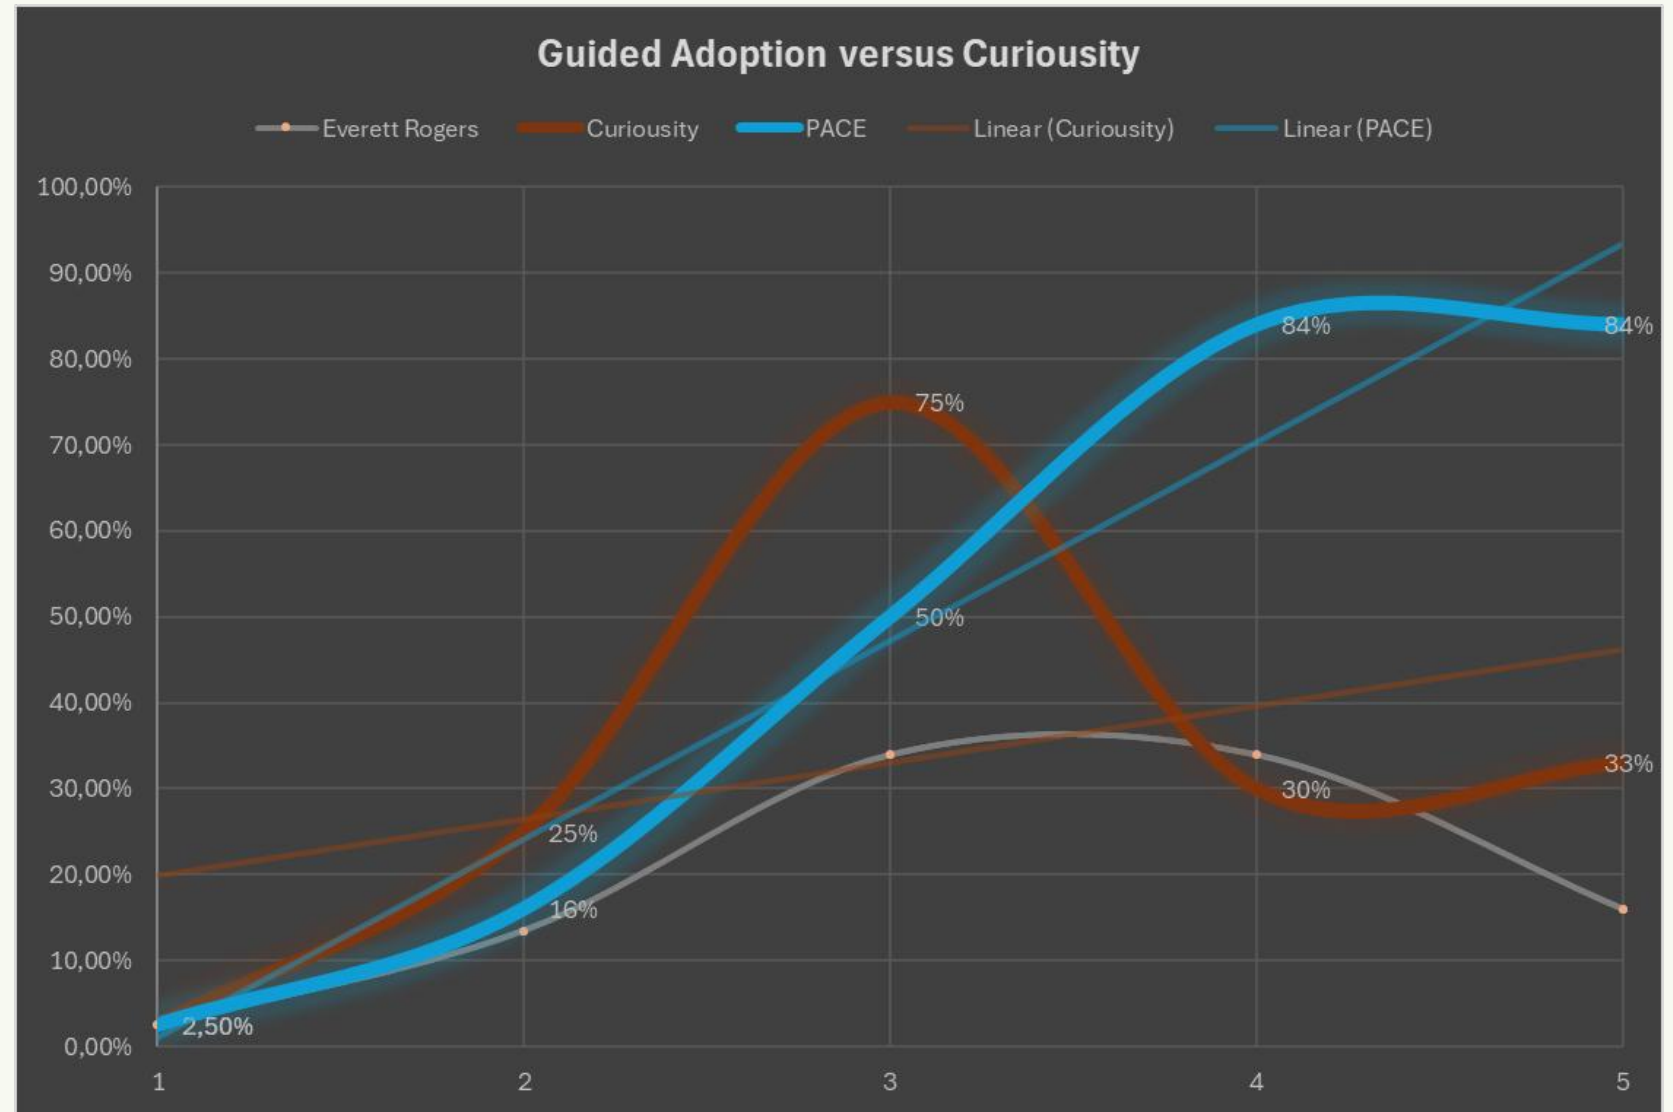

HCL Domino IQ

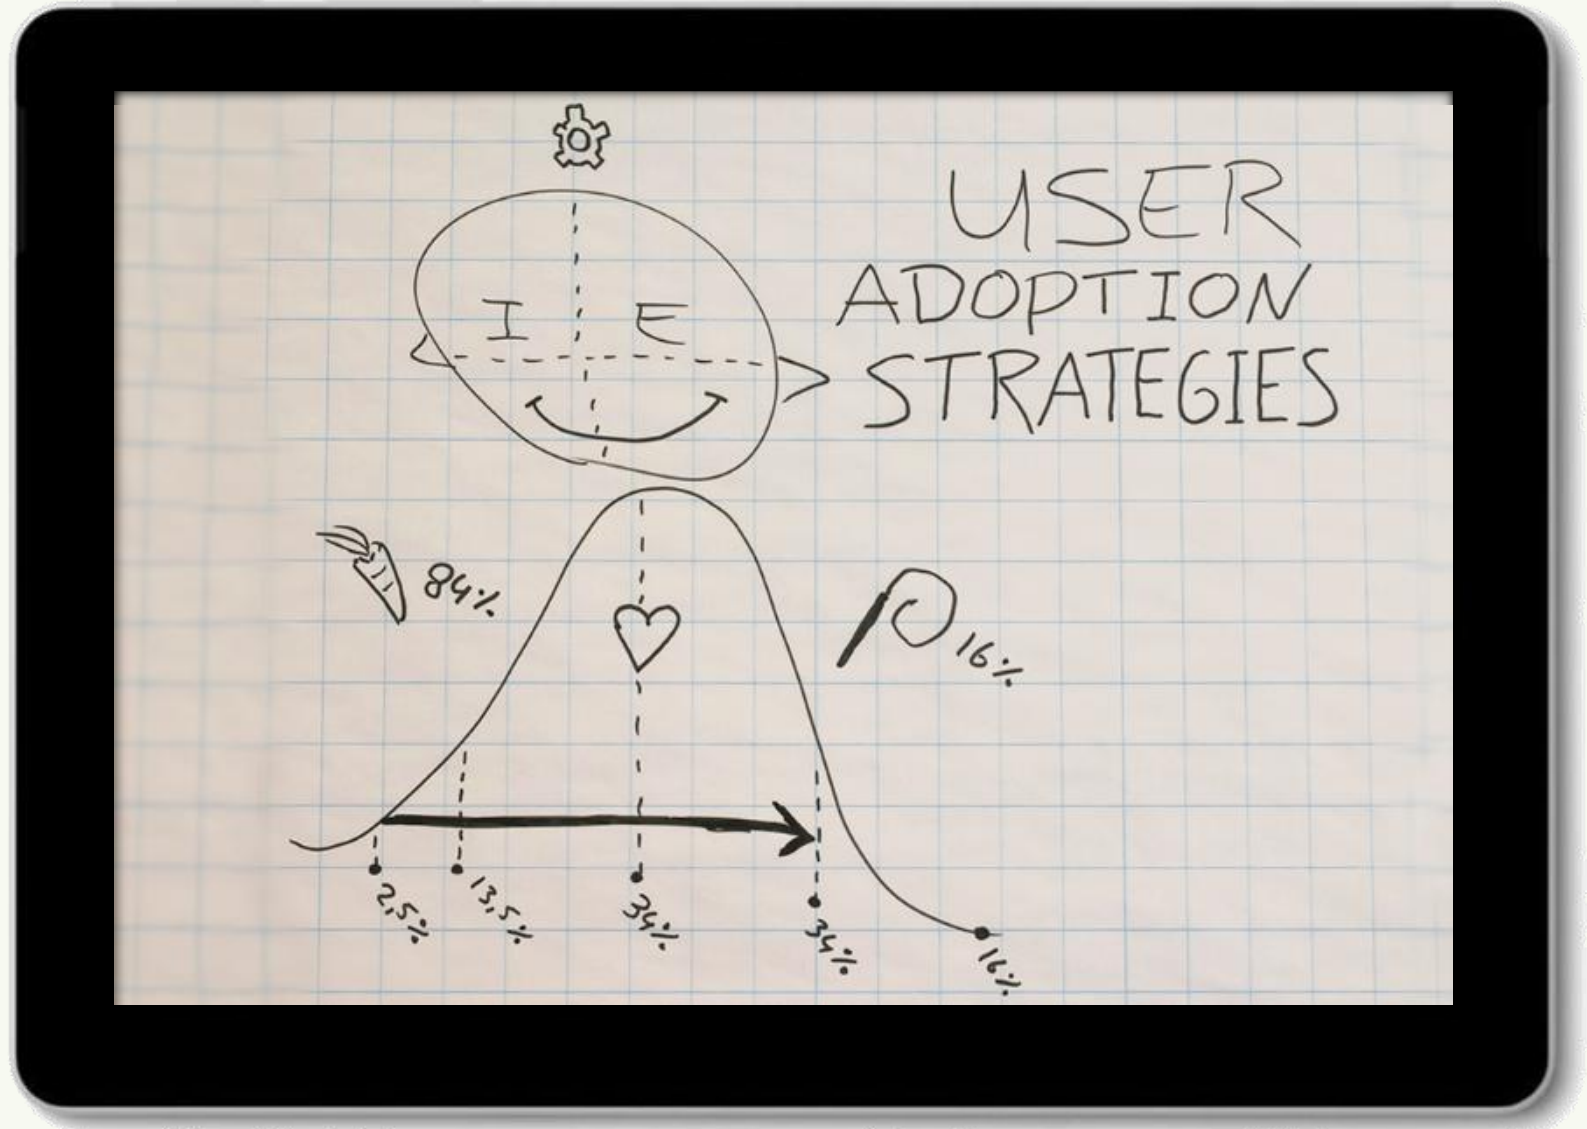

adoption rate

Different approaches deliver different adoption rates:

- > Unguided curiosity creates a great pike in the beginning. Mainly based on FOMO. After first experiments most people stop using it because of missing guidance.
- > Guided change approach follows the Everett Rogers curve and maintaining growth till 84%. Then maintenance is required for onboarders and new developments.

Our strategy in 2 minutes:

Implementation methodology

P Planning the change Testing ground		A Activate technique for 1st group Pilot	C Cultivate rethinking and train everyone Production	E A little better every day, 365x Perfect Step-by-Step!
Measure Culture Content Shadow ICT Chances Risks	Plan 3 years 3 months	Start small with experiments Learn, Evaluate, and Conclude Ambassador recruitment	Communicate and scale Train based on preferences Support in the workplace	Measure actual usage Provide continuous learning Improve and develop
Business Consultant Plan the transformation journey & determine why the change is necessary.		Implementation Consultant Advise tools and make them available. Prepare the technique and workouts.	Trainer Create new ways of working according to our productivity scenarios.	Supporter Evaluate and process changes in organization, technology and the world.

orkshop Copilot Value Discovery

- > Discover and determine the added value of Copilot together in half a day.
- > Aimed at the information worker to carry out supporting processes smarter, faster and possibly automated.
- > At the end of the workshop, a clear picture and a plan of action for a (phased) roll-out of Copilot with defined business cases from the employees themselves.

genda (half day)

> **Welcome and Introduction (10 minutes)**

- Brief introduction of participants
- Overview of the workshop objectives and agenda

> **Introduction to Microsoft Copilot (20 minutes)**

- Overview of Copilot capabilities
- Demonstration of key features and use cases

> **Identifying Business Needs and Opportunities (45 minutes)**

- Discussion on current business challenges
- Exploration of potential areas where Copilot can add value

> **Break (15 minutes)**

> **Deep Dive into Business Cases (45 minutes)**

- Detailed analysis of specific business cases
- Interactive session to map Copilot capabilities to business needs

> **ROI Calculation and Business Case Development (45 minutes)**

- Introduction to ROI calculation model
- Hands-on session to calculate potential ROI for identified use cases

> **Q&A and Next Steps (30 minutes)**

- Open floor for questions and discussions
- Outline next steps and action items

The image features a central digital funnel composed of binary code (0s and 1s) that tapers from a wide base to a narrow neck. At the top of the neck is a glowing orange ring. The background is a dark blue space filled with a network of white lines and dots, suggesting a global or digital network. The overall aesthetic is high-tech and futuristic.

To AI or not to AI!
