

Additional Resources

Events:

I maintain a public Google calendar of data science and AI events for the learners but if interested you can add it as well: [Subscribe to calendar](#)

Data Analysis:

- [Kanaries](#): Different libraries for data analysis and visualization. I haven't tested them myself yet.
- [Python Packages for Automated EDA You Should Use](#)

Machine Learning:

Explainers: These walk you through visually on how some of the algorithms we saw work.

- [K-Means Explainer](#)
- [MLU Explain](#)
- [Convolutional Neural Network \(CNN\) Explainer](#)

Time series:

- [Prophet](#): Meta open source model for time series forecasting
- [Sktime](#): Build on scikit-learn specifically for time series
- [Example of Deep Learning Method for the Bike Demand Dataset](#)

Low-code tools:

- [Pycaret](#): ML library that allows you to compare multiple models. You can look at the quick-start.

AI/ML for Good Organizations:

- ClimateChangeAI has many tutorials:
 - [Predicting Mobility Demand from Urban Features](#)
- [DrivenData.org](#): Has a lot of competitions but also learning exercises.

Deployment:

- [Streamlit](#): Python Library to build quick apps
- [Gradio](#): Build and share ML apps

Ethics & Sustainability:

- PAIR AI Explorables: They have multiple but these are some suggestions

- [Hidden Bias](#)
 - [Datasets have world views](#)
- [CodeCarbon](#): A python package that measures your CO2
- [AI Fairness 360](#): A python package to help detect and mitigate bias in machine learning models
