LEARN SMARTER.NOT HARDER

How Google's NotebookLM Made Me 80% Faster at Learning Anything

Effective tips to master NotebookLM for faster learning.

Zahin Nazeer

I've said it before, and I'll say it again: the number one skill anyone can master is *learning how to learn*.

Think about it. We spent years in school and college, cramming information that, we probably don't even remember because most of it was not tested both in the exam and in real life. Kinda feels like wasted time learning those. That's where the art of *what* and *how* to learn truly comes into play.

I've always been a keen learner and reader. My biggest flaw? I'd try to grasp *everything* before a test or a task. I simply didn't know how to distinguish what was important, what would be asked in exams, I simply would try to learn everything altogether and end up getting confused and brain-fried

And then Google dropped a bomb. A game-changer. A true gem. **NotebookLM**

This tool has just transformed the way I learn. It's like having a personalized tutor and researcher rolled into one. Let me walk you through how this powerhouse helped me master even the most difficult subjects — like quantity surveying, something that I needed for my civil engineering studies.

Adding Your Knowledge Base: The Multimodal Advantage

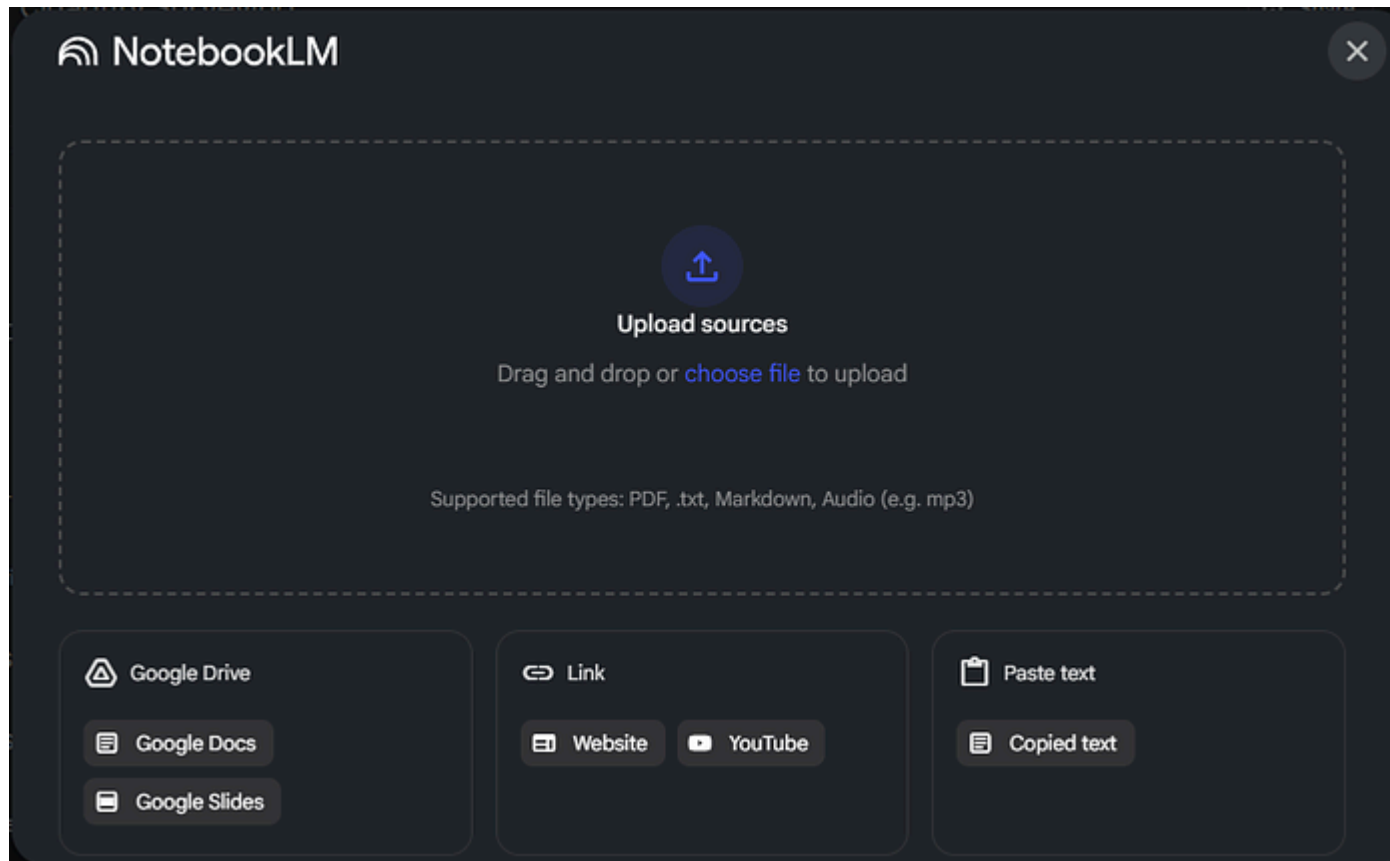

Image by ME

Whenever you start to study a new topic, you're faced with a flood of sources: PDFs, books, articles, and even YouTube videos. The frustrating truth? A huge chunk of this material is repetitive. The same core information, just rephrased

NotebookLM completely gets rid of this problem. My first step? Collect *all* the relevant materials — every PDF, Google Doc, Google Slide, Markdown file, text file, web URL, public YouTube video, and audio file I could find anything that I could ever find on the face of earth.

Then, I simply add them as sources to my NotebookLM.

It's truly multimodal and you can add a maximum of 50 sources per notebook.

Once you've loaded your sources, NotebookLM immediately goes to work, providing a quick, initial summary right in the chat for your brief understanding.

Briefing Docs: The Ultimate Knowledge Synthesis

This feature is where NotebookLM truly shines in skimming information. The "Briefing Docs" option gives you a concise, intelligent summary that collects all your resource materials into a single knowledge base. It avoids repeating information and writes as a new material in itself from all those resources.

Imagine having one brilliant summary of all your sources, combined into a single, clear document.

Structured Learning with Study Guides

If you're like me and you prefer way to learn in a structure, especially for topics that demand a strong foundational understanding, the "Study Guide" option is a pearl. It clearly defines a the pathway on how you should start learning, guiding you on how to move through your studying journey step-by-step. No more wondering where to start or what to tackle next.

Timeline: A Historian's Dream

For anyone going deep into history, biographies, or anything involving dates and characters, the "Timeline" feature is pure gold. Trust me, I wish I had this back in school when I was studying social sciences and history. All those hours spent skimming massive textbooks just to compile a neat, chronological timeline are now a thing of the past. *sigh...* NotebookLM creates them for you, in perfect order.

Mind Map: Visualizing Complexity

Image generated by ME using NotebookLM

Ever wished you had something that could refresh your entire understanding of a complex subject in just five minutes before an exam? Here's your answer. You can create visually stunning and genuinely useful mind maps with NotebookLM. This isn't some scrappy, half-baked feature. The mind maps are legit, with neat connections illustrating how topics connect with each other.

Audio and Video Learning

1. Audio Overviews: Your Personalized Podcast Tutor People learn in different ways. Some prefer reading, some watching videos, and others, love to listen and learn. Have you ever been driving, wishing you could specifically listen to something you wanted to learn about, only to find there's no good podcast or audio material on it?

Enter Audio Overview.

You have the power to specify the length of your audio overview and even provide instructions to the AI on what specific information you're looking to learn. This helps you focus exactly what you need. It creates an experience much like two people having a conversation, teaching you in a podcast-style format.

And the best part? You can actually *interact* within the podcast, asking any doubts or questions you have regarding the content. It's something unique which gives us a personalized feeling.

2. Video Overviews: Engaging Visual Presentations For those who thrive on visual learning, NotebookLM creates a "Video Overview." To be clear, it's not generating a working model video, but rather a narrated slide presentation that

someone or just need a basic overview, this video can be a perfect starting point.

Both the Audio and Video Overviews are available in over 80 languages, making learning globally accessible.

Conclusion: Learn Smarter, Not Harder

Now I wish I could have had something like this when I was back in school or college. We procrastinate studying because we manifest a scene of information overload and get tired even thinking about studying. What if there was something that would help you laser out the answers or a structured study guide on what you actually needed? This is your answer.

This isn't something about replacing your brain; it's about helping you learn what is necessary and get on it. If you've ever felt overwhelmed by the sheer volume of information out there or struggled to find a better and effective way to learn, NotebookLM is your answer.

Keep learning.

Keep exploring.
